

atmet[®]

atmet | Automation Became Soft!

Today, it is very important more than any time before to convert organization's manual/paper work to systematic processes quickly & easily, at the lowest possible cost & efforts.

Tens of BPMS & WF engines are there in the market, **atmet** is the preferred solution when it comes to simplicity, adaptability, and flexibility, meeting customer's needs effectively.

Today's Challenges:

Business administrators need to be capable enough to build & amend their business processes themselves, eliminate the need to consult or revert back to IT people.

Business processes, rules, policies are changing more frequent than ever before, the right BPMS should be easy, and flexible enough to meet these changes.

atmet empowers business users to define and continuously improve and model sophisticated business processes with a great simplicity, and can even integrate with any third party system to automate external approvals. With **atmet**, automation of business processes in your organization hasn't been easier.

However, BPMS should allow getting out of the process route anytime easily without the need to modify the process itself.

atmet enables business users to route supporting information required to each decision maker as per the business process they have defined. Enabling the different stakeholders to move forward using the relevant information and therefore stay ahead of the competition with agile and accurate decision making process.

Graphical UI of BPMS & WF designers are great tools, but even so, they need IT skills to be administrated. **atmet** went beyond the traditional

graphical UI designer and offered a straight forward & easy way of creating and managing business processes.

Flexibility is the master, from process, steps, fields, down to actions & timers

atmet Key Features:

- Web based, Bi lingual (supports Farsi, Turkish, Urdu, ..)
- Possibility to build unlimited number of processes, for unlimited number of organizations (License is needed)
- Unlimited number of steps per each process, same process could be different from organization to another
- Unlimited number of fields per each process and step
- Ability to create different types of fields, text editors, data driven (drop down, radio button, check box), auto calculated, function based fields, multi value fields
- Cascaded fields hierarchy, auto filled fields
- Ability to build your actions easily without coding; however, doors open to create even more complicated functions using IT coding capabilities
- Ability to create any number of timers, and assign actions as per business rules
- Build unlimited physical & virtual teams/workgroups, assign to steps & actions
- Users able to change the route and take adhoc actions on spot (as per privileges you have)

Refresh View Request Process... Change Request Owner You belong to (HR Group or Super Role), therefore you have permission to Change Request Owner. 0 0
